

WISCONSIN GRANITE

QUARTZ | STONE | GRANITE | COUNTERTOPS + MORE

Dear Customer,

As you go through the presentation, please understand, this was created to help you understand the process and make sure you have the best outcome, not to overwhelm you. 😊

The staff at Wisconsin Granite is happy to answer any questions you may have after reviewing the presentation.

WISCONSIN GRANITE

QUARTZ | STONE | GRANITE | COUNTERTOPS + MORE

Are you ready?

Template/Measure

Appointment

Countertops MUST be removed by the customer prior to measure/template appointment, unless contract states differently.
Cooktops must be disconnected prior to template if we are removing countertops for you.

Wisconsin Granite will leave if not ready for template/measure scheduled appointment and your install date may change to the next available open date.
Additional fees may apply if you are not ready for measure.

WISCONSIN GRANITE

QUARTZ | STONE | GRANITE | COUNTERTOPS + MORE

Items Required at Time of Template

If items listed aren't at jobsite during time of measure/template, **an additional fee may be applied** to your job.
Wisconsin Granite may need to **cancel your install date and reschedule** when your items arrive, and we have availability.

- Sinks (inspect prior to template appointment: check for cracks and scratches)

Day of Delivery: Open Box & Inspect Do Not Wait Until Measure Day

Damaged or cracked sinks could delay your installation and cause additional fees, inspect early to prevent delays.

- Faucets & soap dispensers
- Do you need an air gap?

Talk with your plumber prior to measure to know if you need a hole for an air gap.

- Cooktops (need to be disconnected if we are doing removal of your current countertops during your measure appointment).

- Farmhouse sinks must be set prior to template appointment (not fully installed- see next page for explanation)

Only applies if you have a farmhouse sink:

Ask your salesperson to show or send you the PDF version via email to view instructions for setting in place/installing your farmhouse sink prior to your measure appointment.

Build support structure for your farmhouse sink into your cabinets. Make sure the sink sits to the correct height and depth where you will want it placed.

Make sure the sink is sitting just below the height of where the countertops will go, countertops extend over the edges of your sink. Use a level on the top and front face to make sure the sink is level and where you want it.

Make sure your sink is level and to the proper height under the cabinet height.

Make sure the sink flanges on the left and right sit back tight to the cabinets and the gap from the top to the bottom of the flange is equal. Push the sink in all the way a

Sink properly leveled out with cabinet. Sinks can be raised up but lowering is challenging if the supports were built too high.

Do not connect plumbing prior to install. Sink should be placed into the position you would like it level on the front and on top of the cabinets but not secured in place and no plumbing connected. Wisconsin Granite will need the ability to slide the sink out and push it back into position during the countertop installation.

Plumbing cannot be connected, and the sink cannot be secured in place prior to install. No plumbing should be connected, and sink must NOT be secured prior to install of your countertops.

When your countertops are installed, the stone will overhang your sink and be glued to the sink. After install of your countertops (24 hours) you can connect your plumbing to the sink. 24 hours is needed to allow the silicone to reach full cure.

WISCONSIN GRANITE

QUARTZ | STONE | GRANITE | COUNTERTOPS + MORE

Sink Plumbing Connections Must Be Disconnected

When to Disconnect?

Prior to Measure Appointment = if Wisconsin Granite is doing your removal of laminate countertops.

Prior to Installation or Removal Appointment = if you currently have granite, quartz, or solid surface and Wisconsin Granite is doing your removal. We typically remove your granite, quartz, or solid surface on the day of installation but sometimes set up a removal appointment prior to installation day. Have plumbing disconnected prior to our removal!

IMPORTANT – WAIT 24 HOURS – After installation to have your plumber reconnect your sink.

The silicone adhesive needs to dry for 24 hours after we complete your new countertop installation.

Install, Are You Ready?

Space Must be Ready for Install!

- All cabinets must be set and leveled by the customer ready for countertops within ¼".
- All areas must be cleared and ready for installers to remove old tops (if WG is removing them). Stone countertops are very heavy, and crews need space to perform installs and access the area for install.
- Wisconsin Granite will not move items at a job site for liability reasons. All areas must be clear and ready for install. All pathways from our trucks to the work area must be clear, if items need to be moved Wisconsin Granite installers will ask the homeowner to move these items.

NOT READY FOR INSTALL

NOT READY FOR INSTALL

- If Wisconsin Granite arrives on site and the room or access is not ready, we will leave the site and may charge an additional fee.
- If Wisconsin Granite must wait for the site to be cleared out, cleaned out, or prepared for install and Wisconsin Granite must wait, we may charge a fee per crew to wait. If your job has more than one crew, you may be charged an additional fee to wait.
- Make sure your site is ready for install and there are **no other contractors** in the rooms or entryways we will be installing in, so we can perform your installation.
- If you will not be ready for install, contact Wisconsin Granite **48 hours** or more in advance to reschedule. Advance notice less than 48 hours could result in reschedule charges and delays to your install. Having a 1-day conflict does not mean that Wisconsin Granite can arrive 1-day later, Wisconsin Granite books our schedule for customers and we would reschedule your job at the next available opening.

These are ready for install

- These are examples of areas ready for install.

Move Items Prior To Install

Job Site Access:

- Moving Items In Your Home
- Clearing Pathway Into Home

Customer is responsible to move items in home and clear pathway into home.

WG employees will not move items in home due to liability for damages.

Empty your drawers or cover them

- During the installation process dust and debris will fall into the open drawers, if you do not want to clean out the drawers from dust or debris empty your drawers prior to Wisconsin Granite's arrival on your job site.

WISCONSIN GRANITE

QUARTZ | STONE | GRANITE | COUNTERTOPS + MORE

Cabinets Must be Level

- It is the homeowner's responsibility to have level cabinets, Wisconsin Granite does not level cabinets. All cabinets must be level to ¼" from end to end of the entire area.
- Stone surfaces are flat and will be leveled to provide you with a level countertop and this will require shims to be used between your countertop and cabinet.
- Wisconsin Granite will level the countertop using shims on your cabinets, Wisconsin Granite is not responsible for unlevel cabinets or for other related items being unlevel to the countertops such as tile backsplash, molding, outlets, etc.
- Homeowner is responsible to cover gaps after installation of countertops with molding or other techniques if they choose to do so, Wisconsin Granite is not responsible for gaps between your cabinets and countertops.

Cabinet Level & Countertop Level

WISCONSIN GRANITE

QUARTZ | STONE | GRANITE | COUNTERTOPS + MORE

Shim from bottom to level your cabinets prior to install arrival

Cabinet Level & Countertop Level

WISCONSIN GRANITE

QUARTZ | STONE | GRANITE | COUNTERTOPS + MORE

WG will need to place shims to level your countertop. Unlevel cabinets will result in larger gaps between cabinets and countertops.

Unlevel cabinets can also result in cracking of stone or seams.

WISCONSIN GRANITE

QUARTZ | STONE | GRANITE | COUNTERTOPS + MORE

Caulk

- Caulk requires maintenance, it will settle and shift, and Wisconsin Granite will not warranty caulk of backsplash to walls.
- It is likely you will need to apply or touch up caulk every year, this is considered a maintenance item. As your home settles and shifts caulk will move and will need to be applied again. Wisconsin Granite can handle this for you but there will be a service charge to apply caulk again, there is no warranty on caulking after the installation.

Caulk

Included: stone to stone caulking

Walls are not even, spacing between countertop and wall is expected.

Caulk Not Included:
An additional fee is charged and added to your order for caulking to wall.
(per room charge)

**If your wall is bowed
or uneven, gaps may be
present behind your
backsplash.**

WISCONSIN GRANITE

Access to Job Site

Extra labor charges may be applied to your project due to stairs, oversized pieces, 3 wall pinch, sharp corners, or access to your job site.

Difficult access, several stairs or large piece which requires extra labor. This will be determined and adjusted at time of measure, if not prior. Your quote will be adjusted if needed.

3 Wall Pinch – over 84 inches will require additional people for installation. An additional fee will be added to your order.

Lantern & Scroll
A Natural Art Experience

Decision Maker MUST be present for Installation

- Decision maker must be present during the install for the entire process. Unexpected items can come up that require feedback from the homeowner to decide so the install can proceed.
- Decision maker must be present for final approval of the job at completion and to provide final payment upon job approval.

**DECISION
MAKER**

APPROVED

Stone Is Heavy...Brackets May Be Needed

**Brackets installed by customer prior to template/measure appointment.
Unless contract states that Wisconsin Granite is installing.**

- Unsupported granite/quartz cannot exceed 1/3 of the supported top to a maximum overhang of 10" for Granite and maximum overhang of 12" for Quartz. If you have more than one side of overhang, it is likely that the corners will need a bracket. Discuss with your salesperson.
- Unsupported stone that is fragile cannot exceed an overhang of 6 inches.
- Wisconsin Granite offers brackets and installation of brackets for an additional fee. We have stock brackets but can also order custom brackets for non-standard designs.

Discuss brackets with your salesperson at the time of signing the contract.

Don't let brackets delay your installation.

Wisconsin Granite's Contract States:

- 1. Moving of Appliances:** Wisconsin Granite will not move appliances. If Wisconsin Granite determines an appliance needs to be moved during the installation of your countertops, WG will require the customer to move the appliance. If a customer cannot move the appliance themselves and approves WG to move the appliance, WG is not liable for any damages such as but not limited to, damage to the appliance, floor, walls, and cabinets.

Incidental Damage

Care will be exercised during the countertop installation; however, scrapes, punctures, or dings to wall surfaces are possible, as are scratches and scrapes to cabinetry. In most cases, cabinets can be easily repaired with a cabinet touch up kit and drywall also easily repaired by the customer.

This is considered incidental damage and is the responsibility of the customer NOT Wisconsin Granite.

Natural Stone, Fissures, Rust, & Surface

- Natural stone may have fissures (which may look like a crack), mineral deposits, or rough areas. The slab you pick is the stone we use. These are natural items in the stone, not faulty material.
- Examine your stone selection to ensure you are happy with your stone choice, these will be present in your countertops after installation.
- The stone you select is the stone WG uses, view your stone and review the surface to ensure you are happy with the stone that will be used in your project.
- Natural stone may also contain mineral deposits such as iron. Iron deposits can rust or have rust marks in or on the stone. Rust marks are not covered under warranty. There are products available to remove rust marks.

ALL ABOUT DIGITAL LAYOUTS

Should you purchase a digital layout? It depends; if you have veined or patterned stone, Wisconsin Granite would suggest you buy a layout. You can view how your countertops will look installed by purchasing a digital layout.

LEARN
MORE

Laser Measure Done ✓ Now Programming Time!

After your laser measurement appointment, we will program your measurements to prepare for the digital layout.

Photos 📷 of Slabs!

We will take photos of your chosen slabs on a large green screen. The slab photos are used to position your countertop pieces onto the slab, moving and shifting the pieces to create the best flow and design.*

Digital Layout Done! 💻 Email Sent!

We will email a digital picture of the completed digital layout. You will be able to review and approve the layout. We ask digital layouts to be approved within 24 hours of receiving them to keep your installation on schedule.*

*SIZE OF PIECES, THE SHAPE OF CABINETS, THE NUMBER OF SLABS PURCHASED, AND THE OVERALL FLOW OF STONE WILL AFFECT YOUR FINAL RESULT. FOR EXAMPLE, IN A U-SHAPED KITCHEN, THE FLOW MAY GO IN TWO DIFFERENT DIRECTIONS. IN FULL-HEIGHT APPLICATIONS, THE THICKNESS OF THE STONE WILL NOT ALLOW VEINS AND FLOW TO MATCH PERFECTLY.

This information only
applies if you:
**Purchased a
digital layout,
and it shows on
your sale order.**

Have additional questions, ask us!

WISCONSIN GRANITE

QUARTZ | STONE | GRANITE | COUNTERTOPS • MORE

This information only applies if:
You have tile backsplash and do not plan to remove.

Keeping your tile? You will be asked to sign a release form, acknowledging the potential outcome.

A frequently asked question we receive:

"Can I keep my tile backsplash and just get new countertops?"

Yes, you can **BUT** take a moment to understand what to expect.

- Your current countertops are likely shimmed, which would cause the installation of quartz or natural stone not to be flush with your existing tile backsplash, causing gaps. In addition, the thickness of your new countertops may be too wide. If there is not enough room between your cabinet and tile, your new countertops may not get installed on your scheduled date, and you would need to remove the tile prior to the installation. Sometimes this may not be known until we begin to install the new stone
- Your current countertop thickness differs from your new quartz or natural stone thickness, which would cause gapping and potentially not allow the new stone to fit in the space.
- Keeping your tile may also result in Wisconsin Granite not being able to level the countertop correctly if there is not enough room between the existing tile and your new countertop.
- Quartz and Natural Stone have to be level; we cannot install unlevel to line up with your tile backsplash.
- We cannot cut the backsplash to line up with your tile.

WHAT TO DO WITH THE GAP?
THERE ARE OPTIONS...INSTALL A TILE QUARTER ROUND PIECE TO COVER AND EVEN OUT THE GAP OR FILL THE GAP WITH TILE GROUT OR SILICONE GROUT.
FOR BEST RESULTS - REMOVE THE TILE AND INSTALL NEW

WHAT TO EXPECT IF YOU WANT TO KEEP YOUR CURRENT TILE BACKSPLASH

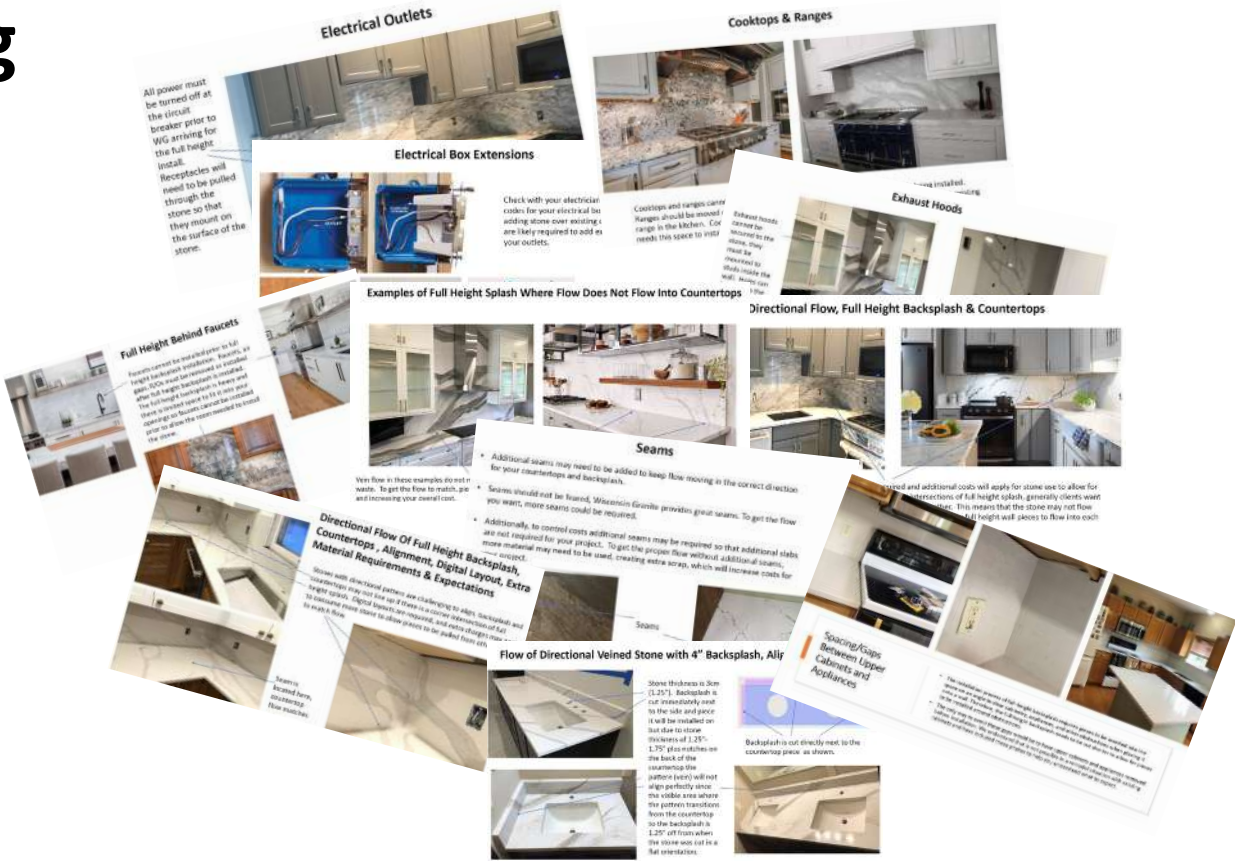

Only applies if you are having full-height stone backsplash installed:

Don't order full-height backsplash without viewing this PDF!
